

Task 7: Business Insights & Recommendations

Business Insights

1. **Revenue is below the target**
 - The total revenue is approximately **₹15.22 million**, while the revenue target is around **₹17 million**.
 - This indicates a revenue gap of approximately **₹1.78 million**, meaning the organization has achieved about **89% of its target**.
2. **Female patients are slightly higher than male patients**
 - Female patients account for approximately **52%** of the total patients, while male patients account for around **46%**.
 - Other gender categories represent a small proportion of approximately **2%**.
 - This indicates a slightly higher utilization of healthcare services by female patients.
3. **ENT department has the highest number of doctors and consultation revenue**
 - ENT has the highest number of doctors, with approximately **8 doctors**, followed by General Medicine with around **7 doctors**.
 - ENT also generates the highest consultation fee revenue, at approximately **₹5.7 million**.
 - This suggests that ENT is one of the strongest-performing departments.
4. **Private insurance covers the largest number of patients**
 - Patients with **Private insurance** form the largest group, with approximately **1.2K patients**.
 - Government insurance follows with around **700 patients**, while Self-Pay and Corporate insurance have fewer patients.
 - This indicates that private insurance is an important source of patient coverage.
5. **Diabetes is the most common chronic condition**
 - Among the chronic conditions shown, **Diabetes** has the highest number of patients, followed by **Hypertension**.
 - Heart Disease and Asthma have comparatively fewer patients.
 - This suggests that diabetes and hypertension require greater attention in terms of preventive care and long-term treatment.
6. **Monthly revenue fluctuates over time**
 - Revenue shows noticeable fluctuations throughout 2025 and early 2026.
 - Revenue reaches its highest level at approximately **₹890K**, while some months fall to around **₹770K–₹810K**.
 - This indicates that monthly revenue is not consistent and may be influenced by variations in patient visits and departmental activity.
7. **ENT and General Medicine contribute significantly to consultation revenue**
 - ENT generates the highest consultation revenue, followed by General Medicine and Gynecology.
 - Several departments, including Pediatrics, Neurology and Cardiology, contribute comparatively lower revenue.
 - This shows that revenue generation is concentrated among a few departments.

Business Recommendations

1. Increase focus on high-demand departments

Since **ENT and General Medicine generate the highest consultation revenue**, the hospital can consider allocating additional resources, appointment slots, and promotional efforts to these departments.

At the same time, lower-performing departments can be analyzed to understand whether their lower revenue is due to **fewer doctors, fewer patients, or lower consultation fees**.

2. Develop preventive-care programs for diabetes and hypertension

Since **Diabetes and Hypertension have the highest number of chronic-condition patients**, the hospital could introduce regular health-screening packages, follow-up programs, and preventive-care campaigns.

This could improve patient care while also encouraging regular follow-up visits.

3. Improve revenue performance against the target

The current revenue of **₹15.22M is below the ₹17M target**. The hospital could focus on increasing patient appointments, improving appointment completion rates, and promoting services in departments with strong revenue potential.
